

ESPON Bridge

Start Date: December 2017

End Date: February 2019

Objectives:

- Develop a methodological approach to measure insularity, peripherally, remoteness accessibility, vulnerability, attractiveness of specific types of territories
- Analysis of challenges and opportunities for competitiveness, quality of life and sustainable growth of territories with geographical specificities in Europe

Description:

The project name is ESPON BRIDGES: Balanced regional development in areas with geographical specificities. GRID-Geneva is fully involved in the Work Package 4: it approaches the areas with geographical specificities from the perspective of their physical environment, natural resources, energy. It demonstrates in what respect the interface between human activities and the physical environment is different in TGS, and explores how multi-level governance framework can help to address this.

Outputs/Results:

- Analytical framework, Innovative ways of measuring,
- Background data for case studies, Syntheses of case study findings,
- Inputs to integrated frameworks and policy recommendations.
